

Lab 8 Close Range and 3D Photogrammetry

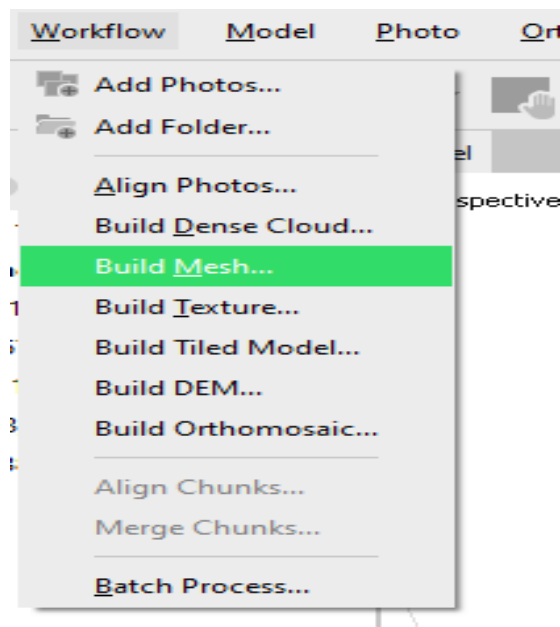

Student Name : Sushant Bhikaji Gurav

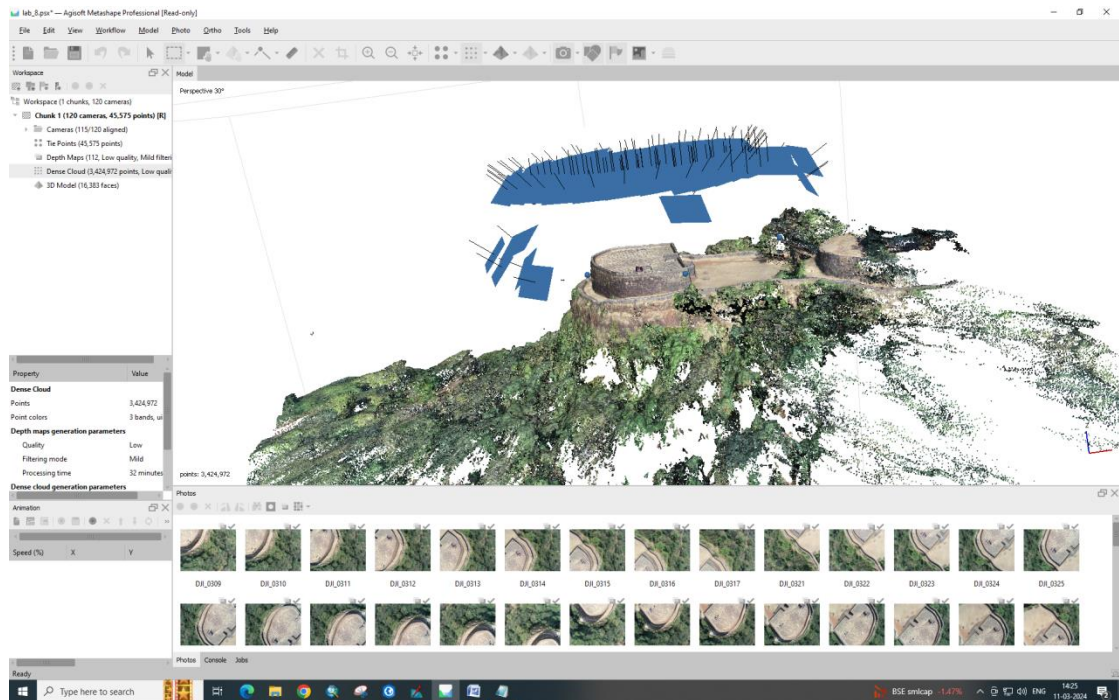

Close-range photogrammetry is the science of creating 3D models of objects by taking pictures of them from different angles. It's essentially the same principle behind how our brains perceive depth – by combining the slightly different viewpoints of our two eyes.

- 1) Add data on software

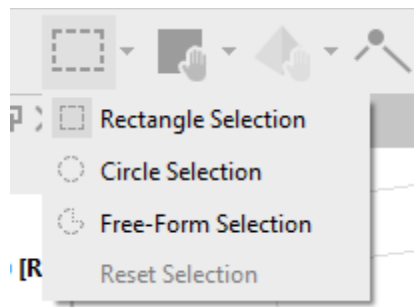

- 2) Then click on workflow and create build mesh

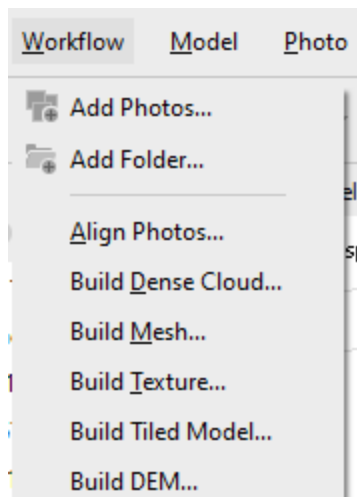

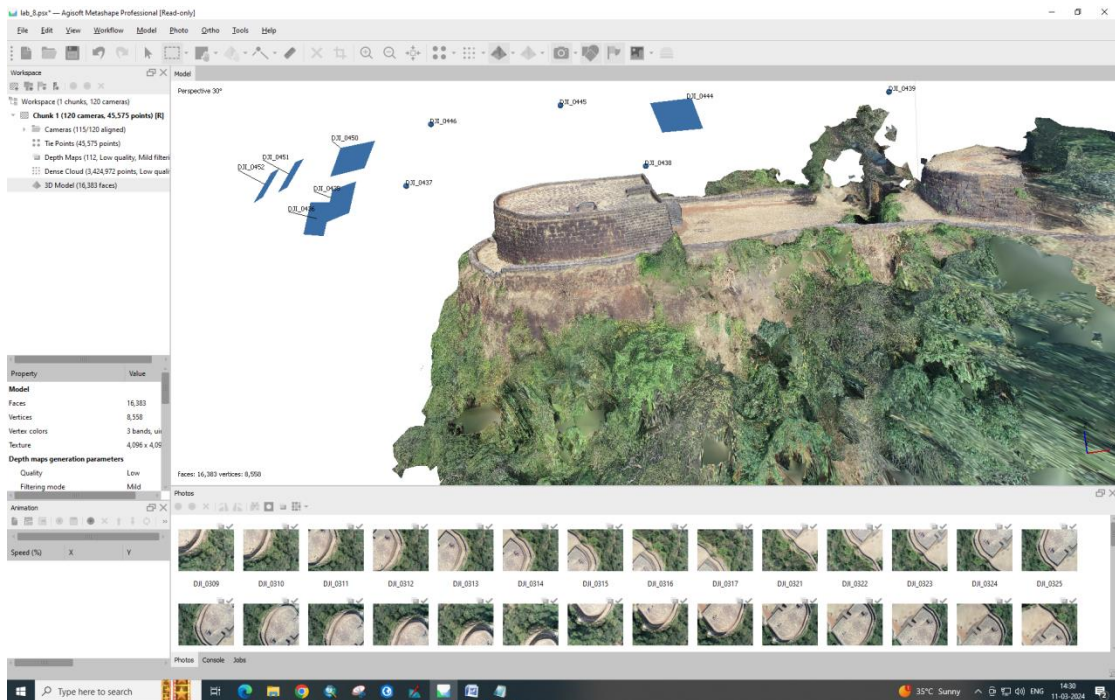

3) Click on selection and delete unwanted area

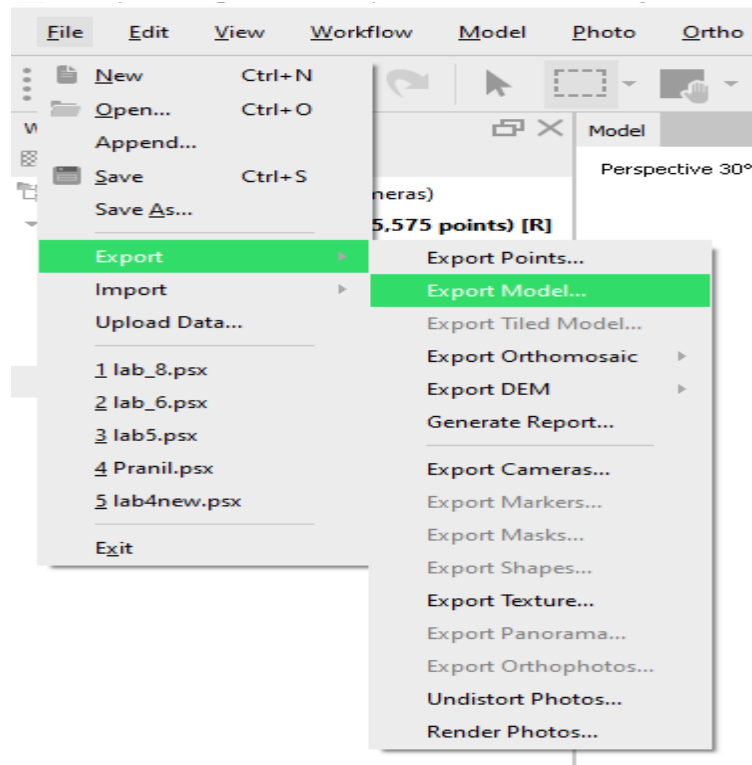

4) After that click on **Build Texture** in workflow

5) Then Go to file and export model

6) That file open in 3D viewer
